PJSC “Sumy NPO”, founded in 1896, is now one of the largest machine-building enterprises in Europe manufacturing equipment for oil, gas and chemical industries.

Unique types of chemical facilities, centrifuges, compressors and turbo-compressor units, pumps and valves for gas pipelines, oil – refining equipment and gas-filling stations, drill collars and complex gas preparation plants – this is far from being a complete list of products manufactured at the company.

Products diversity owes to company’s well-developed technical and process basis available. Company includes specialized plants equipped with the most advanced equipment and modern control facilities. Company has a testing facility which complies with the most strictest requirements to performance of acceptance testing of products manufactured.

High quality of products is ensured by the quality system valid in the Company. The quality system fully corresponds to the international standard ISO 9001, which is confirmed by the Certificate of Approval, granted by the international certification body Bureau Veritas Quality International. The whole range of equipment, manufactured by the Company, meets the requirements of national and international standards.

PJSC “Sumy NPO” is the largest manufacturer of pumping equipment in Ukraine and CIS countries. Manufactured pumping equipment is rather diversified and finds wide application almost in all branches of industry.

Company’s history in production of pumps has more than 100 years experience. The first water pumps were manufactured in 1902. There were pumps for sugar plants. In 30th the company mastered the production of liquid-packed ring-type pumps and at the end of 40th — vacuum rotary vane-type pumps. 60th years is the beginning of manufacturing of special chemical pumps made of titanium. In 80th it was actively continuing the mastering of new types of pumping equipment for oil, chemical and other branches of industry.

For stimulation of oil production by method of water flooding of oil beds under high pressure since 1980 PJSC “Sumy NPO” started to produce multi stage centrifugal pumps of U.HC (CNS) type. Presently more than 10 000 of such pumps are under operation in oil industry. These pump units have been supplied not only to CIS countries but also to Iran, Syria, Argentina, Pakistan and other countries. They are in great demand among oil-industry specialists, especially in Western Siberia. For 30-year period of production of U.HC (CNS) pumps designers considerably improved these pumps, mastered new types of this equipment.

The development of industry in 90th determined the mastering of new types of pumping equipment.

We enlarge the range of vacuum liquid-packed ring-type and rotary vane-type pumps, centrifugal pumps for chemical, coal, metallurgical, paper making and other branches of industry and develop new types of pumping equipment.

PJSC “Sumy NPO” becomes the main supplier of special pumping equipment for nuclear power plants.

The range of production includes reactor coolant pump with power 8 000 kW and head 20 000 m<sup>3</sup> of coolant per hour for I circuit of power generating unit and 14 types of pumps of the II circuit (feed water, condensate, circulating pumps). Manufacturing of pumps is carried out in specialized workshops in full compliance with the requirements of Safety regulations for nuclear power energy and subject to strict technical inspection and tests. Total service life of this equipment is not less than 30 years.

Running nuclear power plants in Russia, Ukraine, Armenia, Lithuania, Bulgaria, Finland, Czech Republic, Hungary, Slovakia and China are completed with pump equipment manufactured by Sumy machine-builders.

Electric pumping unit (pump) is designed for pumping of oil products (petrol, diesel fuel), flammable and highly inflammable liquids with the temperature to 347K (70°C). Pumping unit is operated at areas with temperate, cold, temperate-and-cold climate (temperature range

-60°C - +45°C), category of location 2,4 according to GOST 15150-60.

Pumping unit is manufactured in versions which differ in material and seal type.

Dimensional drawing of electric pumping unit KhME 25-20-140-D-5

#### Technical Data

Capacity, m <sup>3</sup> /s (m <sup>3</sup> /hour)	5.6x10 <sup>-4</sup> (2)
Head, m	25
Rotational speed (synchr.), s <sup>-1</sup> (rpm)	50 (3000)
NPSH, m, no more than	3
Inlet pressure maximum MPa (kgf/cm <sup>2</sup> )	0.2 (2)
Power at $\rho=1000$ kg/m <sup>3</sup> , kW,	pump / pumping unit 0.6 / 0.75
Pump efficiency, %, no more than	26 / 21
Solid impurities maximum size, mm	0.1

#### The example of pump and pumping unit designation

"Electric pumping unit KhME 25-20-140-D-5"

"Pump KhME 25-20-140-D-5",

where KhM - modular pump;

KhME - modular pump in explosive design;

25 - inlet diameter, mm;

140 - impeller diameter, mm;

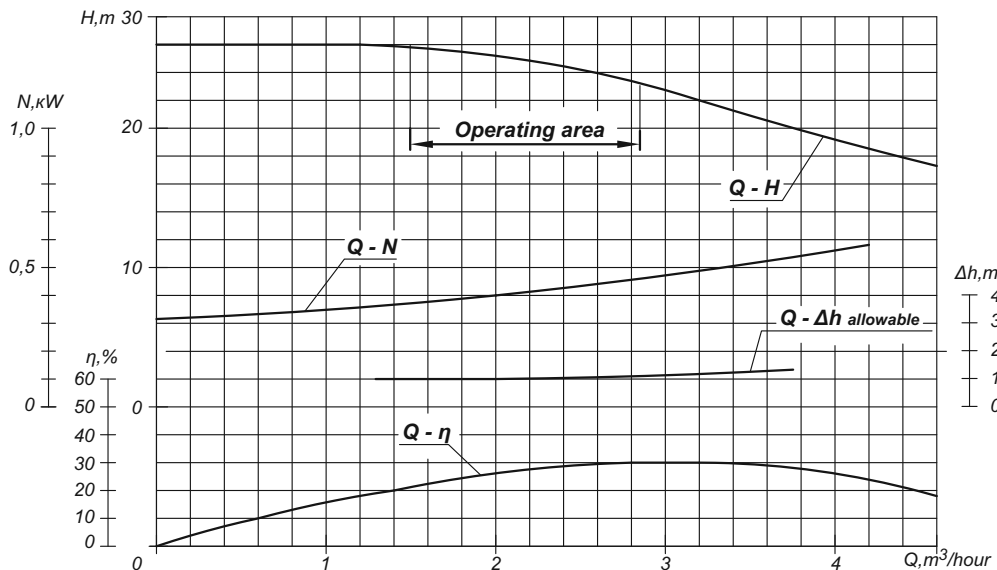

D - material of inner flowing part:

D - steel 20X13Л;

K - steel 12X18H10T;

5 - type of rotor end seal - single end with additional emergency.

#### Performances and curves of electric pumping unit KhME 25-20-140-D-5 (n=3000 rpm)

Pumps of “Kh” and “KhE” types with the capacity from 6.3 m<sup>3</sup>/hour to 400 m<sup>3</sup>/hour and pumping units on their basis are designed for supply of oil, oil light products, chemically active and slightly aggressive liquids which may cause corrosion of pump inner flowing part material not more than 0.1 mm/year, and neutral liquids.

The pumps and pumping units are manufactured for the areas with temperate and cold climate (temperature range - 60°C - +45°C), category of location 2, 4 according to GOST 15150-60.

Pumps and pumping units are used for operation at explosion zones V-1a, V-1r as per Regulations for the design and construction of electrical installations. They are designed for pumping of liquids the vapors of which can form explosive mixtures of II category, groups T2 and T3 as per GOST 12.1.011-78 belonging to hazard categories III and IV according to GOST 12.1.005-88.

### The example of pump and pumping unit designation

“Pump KhE 100-65-200-100/50-D-5 TU U3.19-05747991-096-99”

“Electric pumping unit

KhE 100-65-200-100/50-D-5 TU U3.19-05747991-096-99”

The same with first modernization

“Electric pumping unit

1KhE 100-65-200-100/50-D-5 TU U3.19-05747991-096-99”

where KhE - Kh - horizontal, cradle-mounted, single stage pump with axial inlet and radial outlet, with support placed on casing.  
The pumps are designed for supply of chemically active, neutral and slightly aggressive liquids;  
AKh -the same with open impeller;  
KhE -the same designed for supply of flammable and highly inflammable liquids.

Pumps are manufactured in versions which differ in material and seal type:

D - material of inner flowing part:

- A - carbon steel;
- D - steel 20X13Л;
- T - titanium alloy BT 1-0;
- K - steel 12X18H10T;

5 - the type of rotor end seal:

- 5 - single end seal;
- 55 - doubled end seal;
- S - gland seal;
- SD - doubled gland seal (with c hydraulic seal).

The Company improves the pumping equipment and equips pumping units with the motors of different manufactures. Thereby when ordering, please specify overall and mounting dimensions and required parameters according to the recommended form of Data Sheet.

at the rotational speed  $n=24\text{ s}^{-1}$  (1450 rpm) with water of density  $\rho = 1000\text{ kg/m}^3$

Submerged pumps and pumping units on their basis are designed for pumping of weak aggressive and neutral liquids with density of no more than  $1050 \text{ kg/m}^3$ , containing solid impurities up to 0.2 mm and volume concentration no more than 1.5 %.

Electric pumping units are manufactured of two types:

- general-purpose (KhPV);
- of explosive version (KhPE).

## 18 CN Centrifugal Cradle-mounted Pumps

Electric pumping unit of CN type are designed for pumping of storm sewage and soils, household sewage and other contaminated liquids with density to 1300 kg/m<sup>3</sup>, pH index of sewage systems.

Centrifugal pump is of horizontal, single stage, one-casing type. Pump inner flowing part consists of pump casing, armor-plated disk and impeller.

Application: systems for industrial and public water supply.

Pumping of combustible liquids and installation of pumping units in areas containing explosive mixtures are not allowed.

## CPN Centrifugal Cradle-mounted Pumps for Liquids with Foreign Impurities

Electric pumping unit of CPN type are designed for pumping of abrasive hydraulic fluids with the following properties:

- density up to 1300 kg/m<sup>3</sup>;
- pH index from 6 to 12;
- temperature from 5 to 70°C;
- volume concentration of solid impurities up to 30%;
- micro-hardness of particles up to 11000 MPa.

Centrifugal pump is of horizontal, single stage, one-casing type. Pump inner flowing part consists of pump casing, armor-plated disk and impeller made of wear-resistant alloy.

Applied for pumping of products of rocks processing, ash, slag, ferrous and nonferrous metal ores tails, argillous-arenaceous rocks, grained sands, sand and gravel rocks, gravel and spoiling rocks.

**Application:** ferrous and nonferrous industry, coal and metal mining industry, melioration and irrigation, industrial and public water supply.

Pumping of combustible liquids and installation of pumping units in areas containing explosive mixtures are not allowed.

Designed for pumping of slightly aggressive and neutral liquids containing solid impurities of different concentration and dimensions. Hydrogen index of pumping medium pH 6-11.

Pumps may be applied for pumping of products of rocks processing, ash, slag, ferrous and nonferrous metal ores tails, argillo-arenaceous rocks, grained sands, sand and gravel rocks, gravel and spoiling rocks and household sewage.

Pumps CVP 225-60 and pumping units on their basis are designed for pumping of abrasive hydraulic fluids.

Units are manufactured in climatic version UKhL (for areas with temperate and cold climate), placement category 4 according to GOST 15150-69.

Pump NShB 550-45 is centrifugal, vertical, single stage, double-casing with armoured inner casing, outboard rolling bearings. These pumps are designed for pumping of industrial wastes containing scale and slag.

### Design features:

- centrifugal pumps of single stage, one-casing, cradle-mounted type;
- pump inner flowing part consists of pump casing, armor-plated disk, impeller made of cast iron modified by nickel and chrome to improve wear-resisting properties;
- rolling bearings are used in pump bearing unit; bearing unit is highly unified and can be provided with heat exchanger for cooling of oil during pump operation in conditions exceeding operating pumping range;
- pump is driven through flexible pin coupling;
- it is provided for hydro seal of stuffing box seal.

Application: ferrous and nonferrous industry, coal and metal mining industry, melioration and irrigation and industrial and public water supply.

 "Pumping unit CVP 225-60",  
 where CVP - centrifugal vertical submerged pump;  
 225 - capacity, m<sup>3</sup>/hour;  
 60 - head, m.

"Pump NShB 550-45",  
 where NShB- sludge armoured pump;  
 550 - capacity, m<sup>3</sup>/hour;  
 45 - head, m.

The Company improves the pumping equipment and equips pumping units with the motors of different manufactures. Thereby when ordering, please specify overall and mounting dimensions and required parameters according to the recommended form of Data Sheet.

Dimensional drawing of CVP 225-60 pump

Pumped media temperature, °C	5 ... 70
Density, kg/m <sup>3</sup> , not more	1300
pH index	6 ... 12
Power (at $\rho = 998,2 \text{ kg/m}^3$ ), kW:	
- pump	54.5
- pumping unit	60
Efficiency (at $\rho = 998,2 \text{ kg/m}^3$ ), %:	
- pump	64
- pumping unit	58
NPSH, m, not more	6,3
Volume concentration of mechanical impurities, %	30
Solid particles size, mm, not more	6
Microhardness of particles, MPa, not more	1100

Performances and curves of CVP 225-60 pump at the rotational speed  $n=24,2 \text{ s}^{-1}$  (1450 rpm) with water of density  $\rho=998,2 \text{ kg/m}^3$

**Dimensional drawing of NShB 550-45 pump**

Pumped media temperature, °C	10-40
Concentration of slag-containing impurities, mg/l	2000
Consumed power, kW	130
Efficiency of pumping unit, %	50
Engine 4A315S4Y3:	version 1M 3081
Voltage, V	380
Power, kW	160

**Performances and curves of NShB 550-45 pump at the rotational speed  $n=1500$  rpm with water of density  $\rho=998$  kg/m<sup>3</sup>**

CNS 120-..., 180-..., 240-... Centrifugal Multistage Pumps are manufactured in two modifications:

- with removable rotor bearing assemblies for lubrication of which it is necessary to supply oil (pump version "2");
- with built-in hard-alloyed bearings operating on pumping medium (pump version "3").

Pumps conform to the requirements of standard API 610.

Inner flowing part of pumps is made of:

- steel 20X13;
- steel 12X18H12M3T (modification "M").

Centrifugal Multistage Pumps are completed with seals:

- mechanical ones - "T";
- gland ones - "S".

Centrifugal Multistage Pumps of CNS type pump version "2" are designed for pumping of pure water and oil field water without hydrogen sulfide into oil-bearing formations.

Pumps of version "2M" are designed for pumping of aggressive oil field water, including water containing hydrogen sulfide, into oil bearing formations.

Drive is performed by synchronous or asynchronous electric motors with power from 500 to 2000 kW.

Pumps are equipped with automatic system providing protection and alarm for critical parameters.

Pumps of CNS type pump version "3M" are designed for pumping of aggressive oil field water including water containing hydrogen sulfide into oil bearing formations.

Drive is performed by synchronous or asynchronous electric motors with power from 600 to 1600 kW.

Pumps are equipped with automatic system providing protection and alarm for critical parameters.

### The example of designation for pump ordering

"Pump CNS 240-1900-2T TU U3Yu19-05747991-012-95",

where CNS - centrifugal multistage pump;

240 - capacity, m<sup>3</sup>/hour;

1900 - head, m;

2 - serial number of modification;

T - mechanical seal in pump design.

"Pump CNS 240-1900-2S-M TU 26-06-1438-85",

where CNS - centrifugal multistage pump (unit);

240 - capacity, m<sup>3</sup>/hour;

1900 - head, m;

2 - serial number of modification;

S - gland seal in pump design;

M - pump for aggressive fluids.

The Company improves the pumping equipment and equips pumping units with the motors of different manufactures. Thereby when ordering, please specify overall and mounting dimensions and required parameters according to the recommended form of Data Sheet.

### Directions and results of modernization

1. Improvement of pump rotor bundle for the purpose of gain in economic efficiency, expansion of operating head area, reduction of pump vibration activity.
2. Application of mechanical seals, conforming to API 682 requirements, with introduction of flushing system for products of erosion, corrosion and other suspended particles, or gland seals made of up-to-date packing material "Graphlex".
3. Application of flexible plate coupling instead of gear-type coupling intended for reduction of vibration activity, reduction of axial motor rotor displacement, reduction of fire hazard due to non-availability of oil for lubrication, etc.
4. Gain in life of interstage impellers seals.
5. Installation of axial displacement meter for providing the pump protection against drastic destruction in case of axial rotor displacement due to wear of parts and hydraulic discharging device.
6. Optimization of hydraulic discharging device design intended for reliability improvement and achievement of acceptable leakage level through it.
7. Introduction of protection against overflows in the area of impeller seating on the shaft to prevent the washing of the latter or collection of products of erosion, corrosion and other suspended particles in this area.
8. Improved maintainability, reduced repair cycles, increased time between overhauls.

## CNS 120-, 180-, 240- Centrifugal Multistage Pumps Lube System

Lube system to pump CNS, comprising of oil cooler and oil tank BM-0.32, together with motor-pump and gear pump unit, is intended for providing the lubrication delivery to CNS pump bearings.

### Oil tank BM-0,32

### Gear pump Sh 3,6-4

Capacity, m <sup>3</sup> /hour	3.6
Pump pressure, kgf/cm <sup>2</sup>	4
Pump power, kW	1.1
Rotational speed, rpm (s <sup>-1</sup> )	1450 (24)
Allowable vacuum gage suction lift, m	5

**Materials of main parts:** C4 20, steel 20, 35, 38XM10A, bronze Бр.05Ц5С5

Tank volume, m <sup>3</sup>	minimum	0.32
	maximum	0.36
Материал основных деталей:	carbon steel, steel 20K	

Oil cooler

Material of main parts: steel 20

AES is intended for unit control according to algorithm selected, for monitoring of its parameters, protection against emergency operation conditions and providing an operator with information on parameters status and operation modes.

AES may be applied for control of pump units of analogous types, used for maintaining reservoir pressure in oil production wells as a part of cluster pump stations.

AES adaptation to type of equipment controlled is behind the software and is implemented on site from the operator panel.

AES is able to ensure the control functions performance from upper level system, without permanent control by operating personnel.

With regard to stability to the effects of environmental temperature and humidity the AES version corresponds to Group D4 as per GOST 12997-84 (operating temperature under service is ranging from 5 to 50°C and upper value of relative humidity is 85% at 35°C).

With regard to stability to effects of sinusoidal vibrations the AES corresponds to Group L1 as per GOST 12997-84.

AES is designed for service outside the explosion- hazardous premises.

Regarding protection against environmental effects the AES corresponds to protection class IP54 as per GOST 14254-80.

### Protection and control board

- 1 - Ammeter
- 2 - Operator panel
- 3 - Voltage supply lamp
- 4 - Emergency shutdown button
- 5 - Line circuit breaker

### AES receives the following inputs:

- analogous inputs of resistance temperature detectors of TSM type - 16 pcs.
- discrete (two-position) inputs of direct current
  - Level of logic "0", V - 0.5
  - Level of logic "1", V - 19 ... 30

### AES delivers the following outputs:

- discrete outputs, 1A, 220 V - 8 pcs.
- discrete outputs, 25A, 380 V, 50Hz (3-phase) - 3 pcs.

AES has a radial serial interface available and ensures data exchange in standard industrial networks (Unitel-Way, FipWay, AS-1, Fipio, Sacva-date, etc.)

Minimum allowable electric resistance of AES circuits isolation regarding casing and between each other shall be, at least, 10 MOm.

### Technical Data

AES power supply is three-phase AC voltage 380 V, frequency 50 Hz. Electronic components and units power supply is one-phase voltage 380 V, frequency 50 Hz.

Overall dimensions, mm, not more:

- control board - 800x600x350
- gage post - 154x650x360

Weight, kg, not more:

- control board - 52.76
- gage post - 24.7

Power consumption of control circuits at rated

voltage of supply dc mains, kW, not more - 0.1

### Product components:

- Protection and control board;
- Gage post;
- Junction box;
- Head-switch sensor DN-2.5 with terminal block;
- Stop-Start Console PKE 722-2 UKhL 1/2" Spec. TU 16-642.006-83;
- 2 Resistance temperature detectors TSM -1388.5 C2.822.034-6 Spec. TU 25-7363.032-89;
- 2 Resistance temperature detectors TSM -1088.5 C2.822.026 Spec. TU 25-7363.032-89.

## Gage post

### AES provides the following functions:

- Unit control in such operation modes as:
  - manual;
  - automatic;
  - remote.
- Delivery of audible and light warning and emergency alarms, at achieving set values of parameters with indication of description, time of entering and time of acknowledgement with further storing in alarm history files. Period of file information storing is unlimited.
- Delivery of audible and light alarms under malfunction of mechanisms with indication of its description.
- Emergency shutdown of pump unit under all operation conditions.
- Viewing of current parameters values.
- Delivery of information on operational progress of preparation to startup, operation, shutdown of pump unit.
- Status indication of acting mechanisms.
- Constant measurement of motor current by indicating pointer-type instrument.
- Timing of pump unit operation .
- Representation of information on status and malfunctions of controller modules.
- Power supply control of power circuits and control wiring circuits.

Pumps and electric pumping units of CNS type with the capacity of 40, 80, 200 m<sup>3</sup>/hour and head from 90 to 425 m are designed for pumping of pure and contaminated water with the following properties:

- PH index is from 6.5 to 8.5;
- total concentration of sulphate and chloride is up to 20 g/l;
- temperature to 70°C;
- solids contents to 1.5% as per weight;
- solids size is not more than 1 mm;
- micro-hardness is not more than 1.47 GPa.

Units are manufactured in climatic version UKhL (for areas with temperate and cold climate), placement category 4 according to GOST 15150.

### The example of pump designation

"Pump CNS-40-240",

- where CNS - centrifugal multistage pump;  
 40 (80, 200) - capacity, m<sup>3</sup>/hour;  
 240 - head, m.

The Company improves the pumping equipment and equips pumping units with the motors of different manufactures. Thereby when ordering, please specify overall and mounting dimensions and required parameters according to the recommended form of Data Sheet.

### Delivery scope

- pump;
- frame;
- guards
- coupling;
- motor.

### Material of main components

- base components - C420 (steel 25Л- CNS 200)
- inner flowing part - steel 20X13
- shaft - steel 45ХПМА (40ХФА)
- coupling - C420 - CNS 200

Performances and curves of pumps

Centrifugal multistage mine pumps of NSSh 410 type are designed for pumping chemically low active and neutral low-impure fluids at water-drainage installations with fluid influx of 250-410 m<sup>3</sup>/h and elevation head of water lifting being equal to head in the nominal mode (taking into account the resistance of pipeline network).

Application: water-drainage installations of coal and iron-ore mines, mining and smelting enterprises, oil-producing and oil-refining industry, feed water supply, etc.

Horizontal multistage pumps with impellers being installed in single direction and hydraulic balancing device to sustain axial forces.

### Physical and chemical performances of pumped medium

Temperature, K (°C), not more	318 (45)
Solid impurities maximum size, mm, not more	0.2
Content of mechanical impurities, kg/m <sup>3</sup> , not more	5
pH index	6.5..8.5
Total concentration of sulfates and chlorides, g/l, not more	20
Microhardness of solid impurities, GPa, not more	1.47

### Technical data (in nominal mode)

Designation	Capacity, m <sup>3</sup> /sec (m <sup>3</sup> /hour)	Head, m	Rotational speed, s <sup>-1</sup> (rpm)	Recommended motor power, kW	NPSH, m, not more	Pump efficiency, %, not less
NSSh 410-182	410 (0.1139)	182	24.6 (1475)	315	4	72

NSSh 410-910		910		1600		
NSShD 410-910		910		1600 (800x2)		

Note: 1. Allowable head deviation is +5%, -3% from nominal value.  
2. Efficiency is a design value and shall not be considered as an acceptance one.

### The example of designation

"Pump NSSh 410-910, TY Y3. 19-05747991-085-98",  
where NSSh - multistage mine pump;  
410 - rated capacity, m<sup>3</sup>/h;  
182 - head, m.

"Pump NSShD 410-910, 1.3330-33.001.00 TU",  
where NSShD - multistage mine dual-drive pump;  
410 - rated capacity, m<sup>3</sup>/h;  
910 - head, m.

The Company improves the pumping equipment and equips pumping units with the motors of different manufactures. Thereby when ordering, please specify overall and mounting dimensions and required parameters according to the recommended form of Data Sheet.

### Scope of supply

- pump of NSSh 410;
- coupling with guard (for NSShD 410-910-2 pcs.);
- set of spare parts;
- set of special tools and accessories.

### Material of main parts

- inner flowing part - steel 20X13Л GOST 977-88;
- shaft - steel 40XΦA GOST 4543-71;
- suction and discharge covers - steel 25Л-1 GOST 977-88.

Performance and curves of NSShD 410-910 pump at the rotational speed  $n=24.59 \text{ s}^{-1}$  (1475 rpm) with water of density  $\rho=1000 \text{ kg/m}^3$

Due to continuous modernization of electric motors being delivered with pumps the motor identification mark as well as overall and installation dimensions of pump motor units are specified by Customer's individual requests.

Centrifugal multistage mine pumps of NSSh 500 type are designed for pumping of chemically non-aggressive and neutral slightly contaminated fluids at dewatering plants with inflows 350-500 m<sup>3</sup>/hour and elevation head of water corresponding to head at nominal conditions (taking into account pipeline network resistance).

Application: water-drainage installations of coal and iron-ore mines, mining and smelting enterprises, oil-producing and oil-refining industry, feed water supply, etc.

Horizontal multistage pumps with impellers being installed in single direction and hydraulic balancing device to sustain axial forces.

Signature (name, title)

Date of Data Sheet filling in " \_\_\_\_ " \_\_\_\_\_

\_\_\_\_\_

Depending on material of inner flowing part designed for pumping (creation of vacuum) of air, inert or aggressive gases, insoluble in water, to produce or maintain vacuum. Operating medium is water.

Application: chemical, ore mining and smelting industry, food industry, pulp and paper industry, agriculture, construction and medicine.

Main advantage of pumps - easy operation and maintenance. Pumps consist of small quantity of parts. They have no special system for lubrication and oil pumps. All clearances between rotor and static casing are sealed with operating medium. Simplicity of construction, no friction pairs in inner flowing part provide reliability and service life of pump operation.

VVK-150	140 <sup>+10</sup> <sub>-20</sub>	0.05	0.15	5÷35	0÷40	320	300	230	11174

\* - manufactured according to 1.4270-628.00-00T3.

Motor serves as a drive. It is not included in the delivery scope. Compressor can be equipped with any engine of corresponding power and rotational speed.

### The example of compressor designation

"Compressor VK-50M1 TU U3 20-057447991-047-99",

where VK – liquid-packed ring-type compressor;

50 – standard capacity, m<sup>3</sup>/min;

T- inner flowing part material:

T – titanium alloy;

N – stainless steel 12X18H10T;

Without letter - carbon steel or gray cast iron;

M1 – number of modernization;

TU – specifications according to which the pumps are manufactured.

The Company improves the pumping equipment and equips pumping units with the motors of different manufactures. Thereby when ordering, please specify overall and mounting dimensions and required parameters according to the recommended form of Data Sheet.

## Data Sheet

Pump designation \_\_\_\_\_

Application \_\_\_\_\_

Quantity \_\_\_\_\_ pcs.

No	Parameter (Performance)	Unit of measurement	Customer's requirements
<b>FUNCTIONAL</b>			
1.1	Capacity as per initial conditions, at	m <sup>3</sup> /min	
1.2	Suction PN	MPa	
1.3	Discharge PN	MPa	
1.4	Supplied water temperature	°C	
1.5	Gas initial temperature	°C	
1.6	Consumed water flow rate	l/min	
1.7	Rotational speed	rpm	
<b>PUMPED MEDIUM</b>			
2.1	Name		
2.2	Percentage composition (for solutions and mixtures)	%	
2.3	Density	kg/m <sup>3</sup>	
2.4	Viscosity	cSt	
2.5	Water solubility (yes/no)		
2.6	Explosion hazard, category and group as per Electrical Installation Code		
2.7	Presence of abrasive particles, their size and quantity		
<b>SHAFT SEAL</b>			
3.1	Gland single/doubled seal		
3.2	End single/doubled seal		
<b>OPERATING (INSTALLATION) CONDITIONS</b>			
4.1	Pump installation (indoor, outdoor) and the category as per Electrical Installation Code		
4.2	Climatic version		
4.3	The category of explosion safety and fire area location as per Electrical Installation Code		
<b>DRIVE</b>			
5.1	Voltage	V	
5.2	Network power frequency	Hz	
5.3	Motor rotational speed	Rpm	
5.4	Power	kW	

**Appendix:** lay-out, other requirements

Name, address and phone of the Company, requesting the pump \_\_\_\_\_

Signature (name, title)

Date of Data Sheet filling in " \_\_\_\_ " \_\_\_\_\_

Designed for pumping out of air and non-aggressive gases (creation of vacuum), preliminary purified from condensed moisture and mechanical impurities.

Application: chemical, paper, ore mining and metallurgical industry, agriculture, transport, industrial and public water supply.

### Technical Data

Designation	Capacity at suction pressure, m <sup>3</sup> /min	Suction pressure limit, kPa	Cooling water consumption, m <sup>3</sup> /min	Oil consumption, kg/hour	Rotational speed, rpm	Motor power, kW
RVN-25	25	40-10	0.65	0.25	585	55
RVN-50	50	40-10	1.3	0.3	485	75

The Company improves the pumping equipment and equips pumping units with the motors of different manufactures. Thereby when ordering, please specify overall and mounting dimensions and required parameters according to the recommended form of Data Sheet.

Designation	Motor			
	Designation	kW	V	rpm
RVN-25	AIR-315 S10	55	220/380	600
RVN-50	AIR-355 S12 U3	75	220/380	485

Material of main parts: gray cast iron, carbon steel.

### Dimensional drawing of RVN pumps

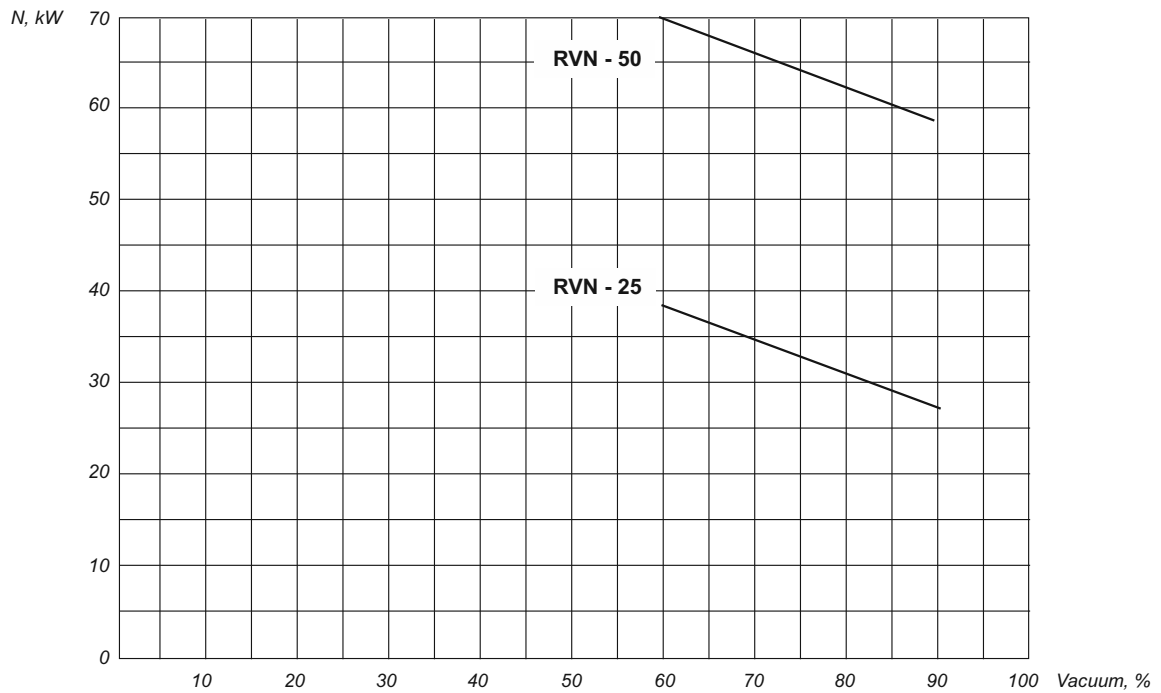

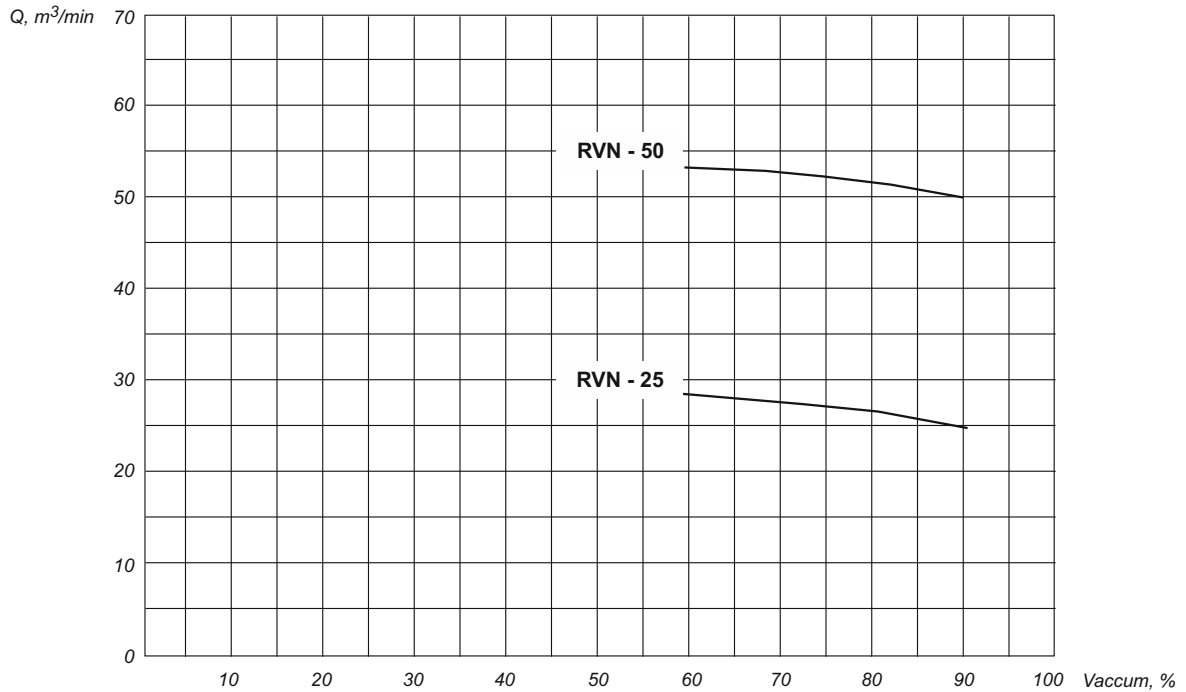

### Overall and installation dimensions

Designation	Dimensions, mm															Weight, kg
	L1	L2	L3	L4	L5	L6	B1	B2	B3	B5	B6	H1	H2	H3	H4	
RVN-25	2250	470	765	805	1070	680	500	360	480	508	650	250	145	285	1100	1220
RVN-50	3170	675	1030	1050	1445	840	600	460	580	610	820	250	155	495	1408	2750

Performances and curves of RVN-25 and RVN-50 pumps

**Certificates of compliance:**

- Certificate of quality management system compliance with ISO 9001:2008 standard;
- Certificate of compliance of industrial health and safety management system with OHSAS 18001-2007 standard;
- Certificate of compliance of environmental protection management system with ISO 14001-2004 standard.
- API conformity certificates:
  - Centrifugal pumps for petroleum and petrochemical industry.
